A new theme — Twist — has been contributed by [\[redacted\]](#) and can be [\[redacted\]](#) ed now. The Twist theme visually floats the Tiki pages on a dark blue background, and has custom graphics for standard menus. (Since themes.tw.o normally uses PHP Layers menus in the left column, please visit the [\[redacted\]](#) and [\[redacted\]](#) pages to see the Twist menu style.)

Please see the [\[redacted\]](#) wiki page for more information, and use the themes.tw.o [\[redacted\]](#) if you have questions or comments. Thanks to Gary (gg) for this theme!
